General Program Information

HackIllinois is a flagship collegiate hackathon with 13 years of history, hosted by the University of Illinois Urbana–Champaign — home to one of the top computer science programs in the country. As a fun fact, HackIllinois also was the first hackathon to introduce the concept of themed hackathons, a model now widely adopted across the hackathon community :)

Each year, we bring together top student engineers, designers, and founders from around the world to build projects that matter. As a mentor or judge, you're part of a selective group of industry leaders who shape both what gets built and how participants grow as builders.

Throughout the weekend, you'll guide teams through Mentor Office Hours, provide technical and product feedback, and evaluate final projects at our Project Showcase. Your expertise sets the technical standard and helps define the culture of ambition that makes HackIllinois what it is.

Many of these projects go on to become startups, research initiatives, or standout portfolio pieces. You're not just evaluating code — you're helping launch what comes next.
